Presentation Overview

A concise review of the three-page Power BI report

- Review the headline sales and financial KPIs.
- Compare revenue across stores, store types, product categories and cities.
- Understand the monthly revenue pattern.
- Identify business insights, data limitations and practical recommendations.

Key Performance Indicators

Values reproduced as displayed in the supplied dashboard

4.71bn
Total Revenue

4bn
Total Costs

979.89M
Total Profit

112K
Total Quantity

41.99K
Average Unit Price

15K
Total Transactions

The KPI cards indicate substantial sales activity across the reporting period.

What the KPIs Tell Us

Headline measures provide a quick view of business scale

- Revenue is displayed as 4.71bn, while costs are shown as 4bn.
- The dashboard reports total profit of 979.89M.
- The report records 112K units and 15K transactions.
- Average unit price is shown as 41.99K.

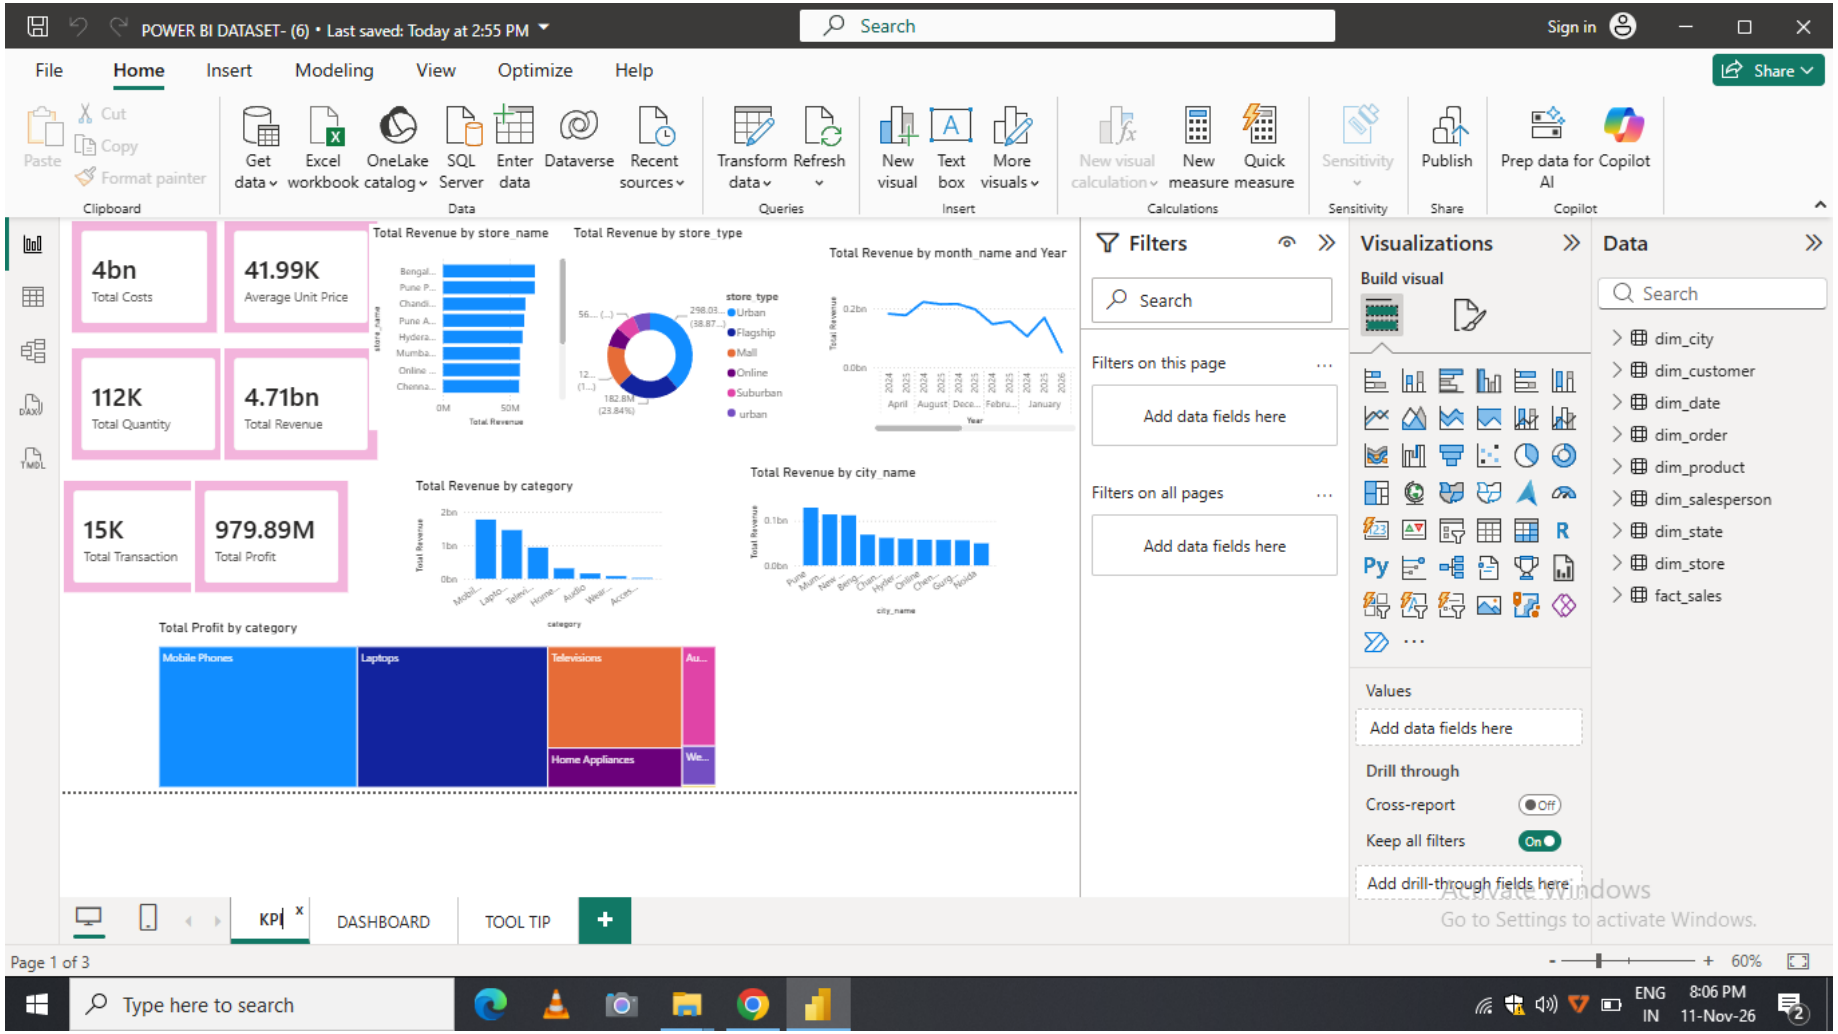

IMPORTANT DATA CHECK

4.71bn revenue − 4bn costs = approximately 710M. This differs from the displayed profit of 979.89M.

Confirm measure definitions, rounding and any additional adjustments before using the figures for formal financial reporting.

Store and Store-Type Analysis

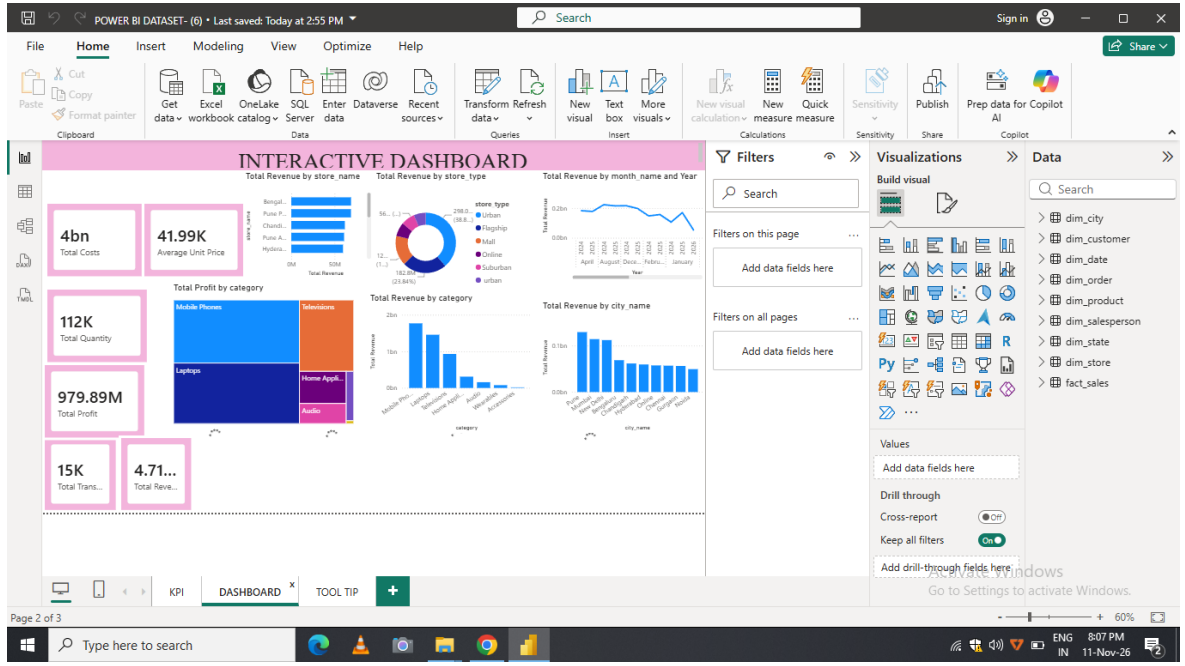

Revenue varies across store names and store formats

- The store bar chart shows differences in revenue across individual stores.
- The doughnut chart compares Urban, Flagship, Mall, Online and Suburban formats.
- Revenue is distributed across multiple store types rather than one channel alone.
- The labels “Urban” and “urban” appear separately and may need standardisation.

Product Category Performance

Mobile Phones and Laptops are leading categories in the visuals

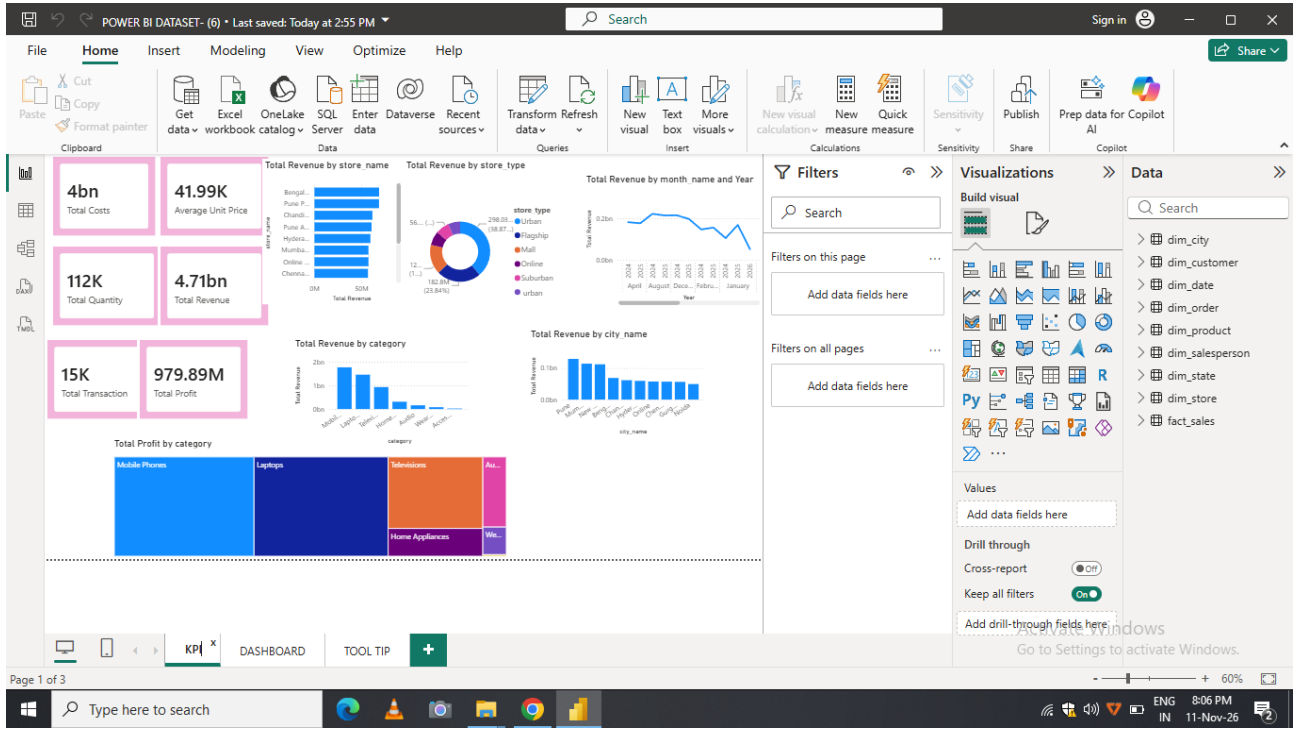

- Mobile Phones lead the displayed revenue chart.
- Laptops and Televisions follow as major contributors.
- The profit treemap also gives large areas to Mobile Phones and Laptops.
- Smaller categories should be reviewed using demand and margin data before decisions are made.

Monthly and City-Wise Revenue

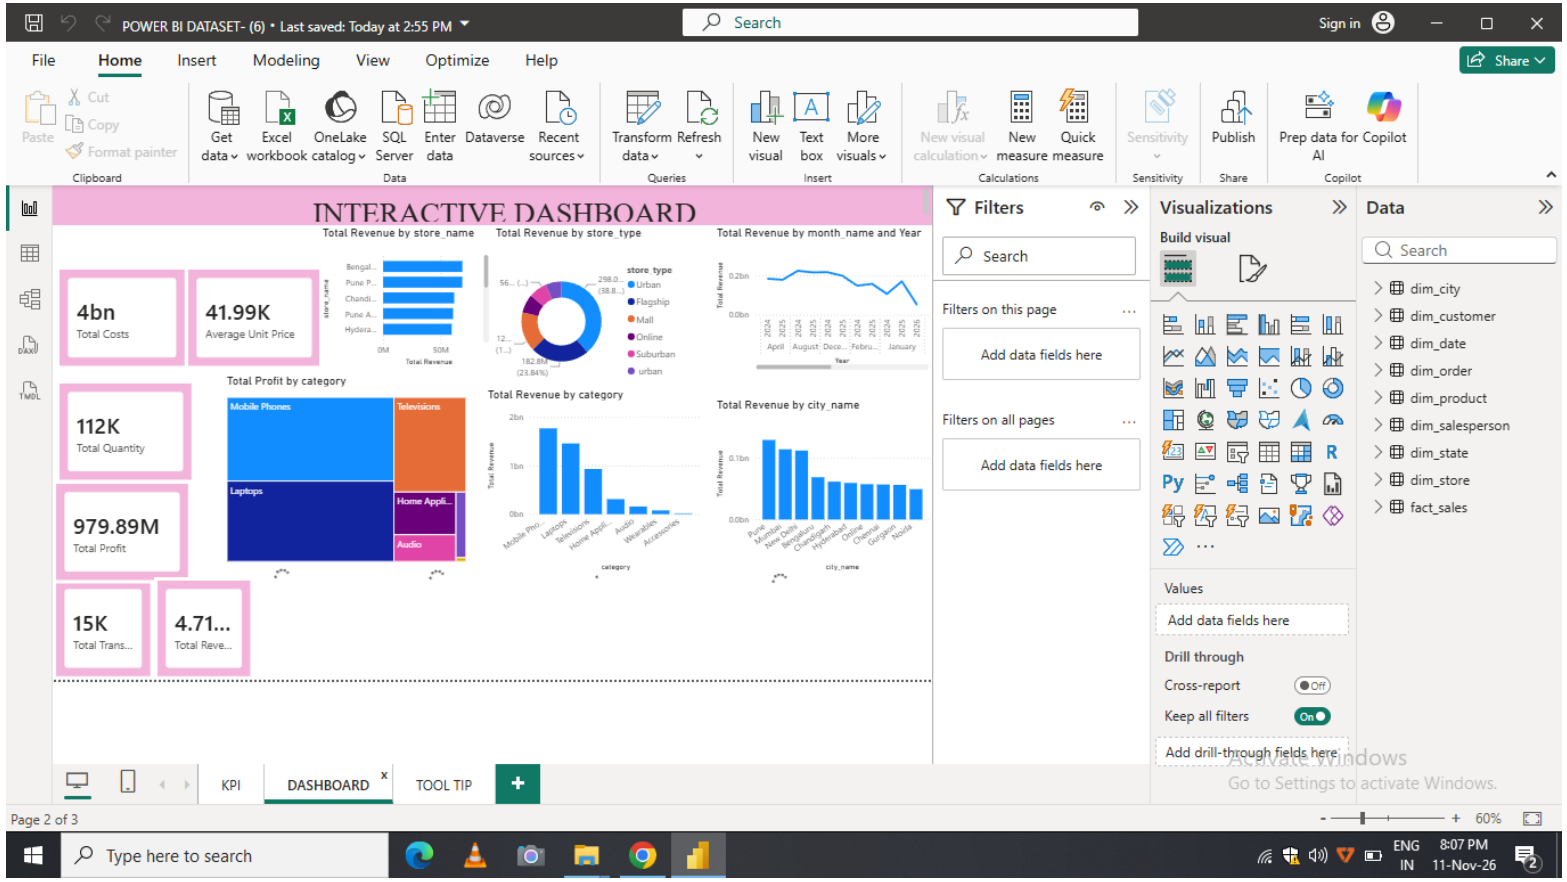

The dashboard shows variation over time and across locations

- Monthly revenue moves up and down rather than following a steady direction.
- Possible influences include seasonal demand, promotions and product availability; these are not confirmed by the screenshots.
- City-wise bars show different revenue levels across the listed cities.
- Exported source data is needed to establish exact city rankings and monthly values.

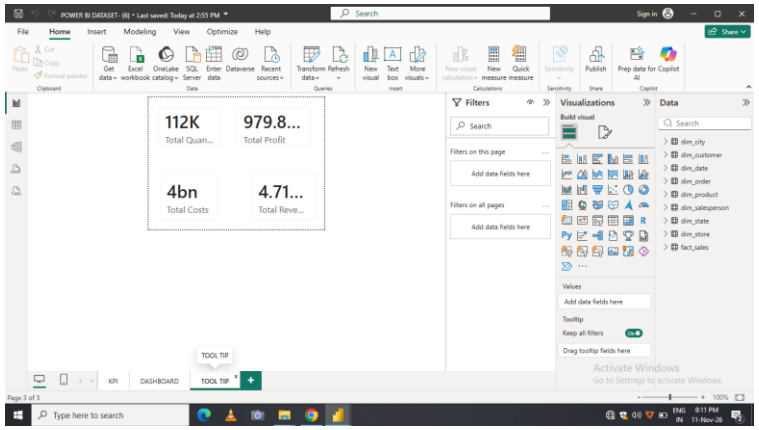

Interactive Dashboard and Tool Tip

The report includes an interactive overview and a compact KPI page

Main Business Insights

What managers can take from the dashboard

SALES SCALE

Revenue is 4.71bn and profit is 979.89M; profit calculation needs reconciliation.

SALES VOLUME

112K units and 15K transactions indicate high sales activity.

CATEGORY MIX

Mobile Phones and Laptops are major contributors in the category visuals.

CHANNEL AND LOCATION

Revenue differs by store type, store and city.

TIME PATTERN

Monthly revenue changes over the displayed period.

DATA QUALITY

“Urban” and “urban” may represent inconsistent category naming.

Business Recommendations

Practical actions based on the visible dashboard patterns

- Verify the definitions and calculations for revenue, costs and profit.
- Monitor stock availability, pricing and profitability for Mobile Phones and Laptops.
- Compare store-level revenue and profit to identify locations needing support.
- Review physical and online store-type performance.
- Investigate month-on-month and year-on-year changes alongside promotions and stock levels.
- Use city-level results to guide inventory and local marketing after confirming exact values.
- Standardise labels and improve chart titles, data labels, currency units and date ranges.

Limitations and Conclusion

A descriptive review based on three supplied screenshots

LIMITATIONS

- The analysis uses screenshots, not the underlying dataset.
- Currency, reporting period and exact chart values are not fully visible.
- The profit difference and the reasons for monthly changes require further checking.

CONCLUSION

The dashboard provides a useful overview of retail sales and financial performance. It highlights overall revenue, costs, profit, sales volume and differences across categories, stores, months and cities.

With validated measures, consistent labels and clearer chart details, the dashboard can better support inventory, marketing and operational decisions.
